

STIRRER

ABSTRACT OF THE DISCLOSURE

An improved structure of stirrer is applicable to mixing up liquid, it is provided with a circular disc having peripherally thereof with a plurality of blades inserted therein in a mutually spaced and inclined way, and a shank of which one end is combined with the center of a surface of the circular disc; thereby, when the stirrer is using, liquid can enter from gaps between every two blades around the circular disc and discharge from an upper and a lower opening in order that liquid can be agitated and blended adequately.
